Software

Vol. 148, 2001

Author Index

A

Akehurst, D. p113
Andersen, R. p89

B

Bae, D.-H. p11
Bae, D.H. p135
Bellosa, F. p99
Bishop, J. p65
Blair, G.S. p89
Blair, L. p89
Bohannon, A. p149
Botha, L. p65

C

Cha, S.D. p135
Cho, S.M. p135

D

Downton, A.C. p31

E

Eksin, I. p75
Endler, M. p1
Erol, O.K. p75

F

Fidge, C. p175
Fleury, M. p31

G

Gill, D.S. p19
Grealish, C. p141

H

Hayes, I. p175
Heffernan, D. p149
Herrmann, S. p104
Hong, J.-E. p11
Hou, C.-J. p122

J

Jones, T. p89

K

Kim, H.H. p135
Kitchenham, B. p165
Kitchenham, B.A. p81

L

Lermer, K. p175
Linington, P. p113
Linkman, S.J. p165
Lo, B.W.N. p45

M

MacDonell, S.G. p81
Martin, G. p113
Mezini, M. p104
Moreto, D. p1

P

Parrington, N. p56
Petalidis, N. p19
Pickard, L. p165
Pickard, L.M. p81

R

Rashid, A. p156
Rastofer, U. p99

S

Sawyer, P. p156
Self, R.P. p31
Shepperd, M.J. p81
Stobart, S. p56

T

Tsai, B.-Y. p56
Tyan, H.-Y. p122

U

Utton, P. p113

W

Waters, G. p113

Y

Ye, H. p45

CIRCUIT THEORY AND DESIGN

Hardware compilation for software engineers: an ATM example p31

COMPUTER COMMUNICATIONS

Formal support for dynamic QoS management in the development of open component-based distributed systems p89
Real-time design in a distributed control network application layer environment p149

COMPUTERISED INSTRUMENTATION

Real-time design in a distributed control network application layer environment p149

CONTROL APPLICATIONS

Real-time design in a distributed control network application layer environment p149

DATA HANDLING

Evaluating composite events using shared trees p1
Using simulated data sets to compare data analysis techniques used for software cost modelling p165

DATABASE MANAGEMENT SYSTEMS

Aspect-orientation and database systems: an effective customisation approach p156
Towards a self-structuring software library p45

ENGINEERING COMPUTING

Formal semantics of an industrially applicable variant of the Specification and Description Language p141
Hardware compilation for software engineers: an ATM example p31
Rate-based packet scheduling paradigm p122
Real-time design in a distributed control network application layer environment p149

FORMAL LOGIC

Formal semantics of an industrially applicable variant of the Specification and Description Language p141
High-level Petri net for incremental analysis of object-oriented system requirements p11
Introducing monitoring events to timed-CSP p19
Semantic characterisation of dead control-flow paths p175
Specification and validation of dynamic systems using temporal logic p135

LOGIC CIRCUITS

Hardware compilation for software engineers: an ATM example p31

LOGIC DESIGN

Hardware compilation for software engineers: an ATM example p31

MATHEMATICAL TECHNIQUES

Evaluating composite events using shared trees p1
High-level Petri net for incremental analysis of object-oriented system requirements p11
Semantic characterisation of dead control-flow paths p175

NEURAL NETWORKS

Towards a self-structuring software library p45

NUMERICAL ANALYSIS

Using simulated data sets to compare data analysis techniques used for software cost modelling p165

OPTIMISATION

Evolutionary algorithm with modifications in the reproduction phase p75

PARALLEL PROCESSING

Component-based software engineering for distributed embedded real-time systems p99
Configuring distributed systems in a Java-based environment p65
Evaluating composite events using shared trees p1
Formal support for dynamic QoS management in the development of open component-based distributed systems p89
Introducing monitoring events to timed-CSP p19
Permabase: predicting the performance of distributed systems at the design stage p113
Rate-based packet scheduling paradigm p122
Real-time design in a distributed control network application layer environment p149

PROGRAMMING SUPPORT

Connectors for bridging mismatches between the components of a software engineering environment p104
Real-time design in a distributed control network application layer environment p149
Towards a self-structuring software library p45

PROGRAMMING THEORY

Evolutionary algorithm with modifications in the reproduction phase p75
Semantic characterisation of dead control-flow paths p175

SIMULATION, MODELLING AND IDENTIFICATION

Rate-based packet scheduling paradigm p122
Using simulated data sets to compare data analysis techniques used for software cost modelling p165

SOFTWARE TECHNIQUES

Aspect-orientation and database systems: an effective customisation approach p156
Component-based software engineering for distributed embedded real-time systems p99
Configuring distributed systems in a Java-based environment p65
Connectors for bridging mismatches between the components of a software engineering environment p104
Employing data flow testing on object-oriented classes p56
Evaluating composite events using shared trees p1
Formal semantics of an industrially applicable variant of the Specification and Description Language p141
Formal support for dynamic QoS management in the development of open component-based distributed systems p89
Hardware compilation for software engineers: an ATM example p31
High-level Petri net for incremental analysis of object-oriented system requirements p11
Introducing monitoring events to timed-CSP p19
Permabase: predicting the performance of distributed systems at the design stage p113
Rate-based packet scheduling paradigm p122
Semantic characterisation of dead control-flow paths p175
Specification and validation of dynamic systems using temporal logic p135
Using simulated data sets to compare data analysis techniques used for software cost modelling p165
What accuracy statistics really measure [software estimation] p81

STATISTICAL ANALYSIS

What accuracy statistics really measure [software estimation] p81

SWITCHING SYSTEMS

Hardware compilation for software engineers: an ATM example p31

SWITCHING THEORY

Hardware compilation for software engineers: an ATM example p31

TELECOMMUNICATION

Formal support for dynamic QoS management in the development of open component-based distributed systems p89
